

Analysis of lithium battery supply issues

Overview

The key conclusions of this perspective have shown that the supply of most materials contained within lithium-ion batteries will likely meet the demand for the near future. However, there are potential risks associated. Sustained growth in lithium-ion battery (LIB) demand within the transportation sector (and the introduction of electric vehicles) is expected. Until recently, the market for lithium-ion batteries (LIBs) was driven by their use in portable electronics. A shift in demand to include larger format devices, such as electric vehicles, is expected.
