

Home Solar Power System Upgrade

Overview

It's important to carry out some simple checks on your solar system to gather the crucial information you will need when deciding what to do next. Weather and wildlife can do damage over time, especially if your sys. You should check what solar output you're getting. On a sunny day, you should be getting around 80% of the system's official output. If you're getting less, then your system is underp. Even if your solar system is performing correctly and efficiently, a change in circumstances may mean you need more energy. Also, you may want to go green and use as muc. The first way to upgrade your solar system is to add more panels. Obviously, this is dependent upon how much space you have to situate the panels, but solar systems are usually fairly flexi. Another way to upgrade your system is to buy a new inverter. If you're adding extra panels, you will generally need a new inverter anyway, unless your last inverter was far too powe.
