

Solar cell top electrode design

Overview

Transparent photovoltaics placed on the additional surface area of buildings, including windows and siding, have the potential to transform renewable energy generation. In contrast to their inorganic, silicon-based counterparts, organic solar cells (OSCs) have high absorption coefficients and can also be flexible, light-weight, and low-cost. However, the use of OSCs as transparent solar cells requires developing a compatible active material alongside a suitable top conductive electrode (TCE) that maintains both high transparency and low resistivity. This mini-review will explore materials for the TCE of organic solar cells, examining the properties, advantages, challenges, and recent progress of such electrodes in the last five years (2016–2020). The performance characteristics of these materials in transparent and semi-transparent organic solar cells, including power conversion efficiency, average visible transmittance, and color-rendering index are noted. The TCEs studied encompass transparent conductive oxides; carbon-based conductive polymers, graphene, and carbon nanotubes; metallic nanowires, nanomeshes, and nanogrids; in addition to ultrathin metals and composite electrodes. The investigation of these top conductive electrodes for transparent organic solar cells offers promise toward more versatile photovoltaics and thus a more sustainable energy future.

- Evaluate top conductive electrode properties and relate to device performance.
- Materials explored include conductive polymer, nanomaterials, and ultrathin metal.
- Researching organic solar cells has led to considerable efficiencies and transmittance.

Electronic Doping in Perovskite Solar Cells

1 Introduction. Metal halide perovskites are a recent class of semiconductors that has found applications in many devices, such as solar cells [1-5] light emitting diodes (LEDs), [6, 7] photodetectors, [8, 9] X-ray detectors [10] or transistors. [11-13] When made from inorganic semiconductors, such as Si or GaAs, these devices employ p and n doping to ensure the ...

Optimizing front grid electrodes of flexible CIGS thin film solar cells ...

The optimal design of solar cell electrodes, as an optimization strategy that does not affect the structural layers and semiconductor materials of the device, can be easily applied to the production of large-area commercial CIGS solar cell products to bring about considerable efficiency improvement and narrow the efficiency gap with small-area devices.

Performance analysis of different top metal electrodes in inverted ...

In this study, we analyze the optimal top electrode for practical polymer solar cells (PSC) fabrication by utilizing the optical properties of the electrode material and study their ...

MoO₃/Au/Ag/MoO₃ multilayer transparent electrode ...

This paper presents the development of the MoO₃/Au/Ag/MoO₃ transparent electrode, which is based on the wide-band-gap perovskite solar cell. We show that using a 1-nm Au seed layer can have an effect on the dense ...

Integration of Metal Meshes as Transparent Conducting Electrodes ...

To attain sustainable solar cell manufacturing on a terawatt scale, the exploration of indium-free TCEs is essential. This study focused on the potential replacement of conventional ITO rear electrode and traditional metal top contacts with mesh electrodes, enabling the creation of transparent or semi-transparent solar devices.

Design and fabrication of a semi-transparent solar cell ...

The FTO/ZnO/P3HT:PCBM/MoO₃/Ag opaque-OSC structure has Ag top electrode with a thickness of 100 nm. Ag has a very high reflectivity and low transmittance, especially in the VR. Thus, using Ag ...

The emergence of top-incident perovskite solar cells

Top electrodes in TIPSCs. (a) Device configuration and top electrode demands of the TIPSC. (b) Working principles of the effect of Ag(O) seeds on Ag growth. (c) Current-voltage (I-V) results of rough silver and smooth silver films. (d) Absolute transmittance from 400 to 700 nm of the as-designed DMD-based transparent electrode.

Recent Progress in Developing Monolithic Perovskite/Si Tandem Solar Cells

In short conclusion, the tandem solar cell that employs ITO as the top electrode has achieved high efficiency, and its fabrication technology has also been well-investigated and developed. IZO. IZO with a high carrier mobility and low carrier concentration appears to be more suitable for transparent conductive electrodes compared to ITO.

Preventing electrode penetration and burn-in degradation in non ...

To prevent top electrode diffusion, two primary approaches have been proposed. ... Rational molecular and device design enables organic solar cells approaching 20% efficiency. Nat. Commun., 15 (2024), p. 1830, 10.1038/s41467-024-46022-3. View in Scopus Google Scholar

Role of electrodes on perovskite solar cells performance: A review ...

Solar cells with absorbing materials like hybrid perovskites have emerged as one of the most researched topics in recent years due to their extraordinary improvement in power conversion efficiency (PCE) from 3.8% in 2009 to 26.1% till 2021 (NREL 2020). These group of materials have a similar crystal structure as inorganic mineral perovskite, CaTiO_3 .

Topology optimization of the front electrode patterns of solar cells ...

The front electrode pattern of the solar cell has an important influence on the performance of the solar cell. This paper proposed an explicit topology optimization method for the design of the front electrode patterns of solar cells. The explicit topology optimization method is based on moving wide Bezier curves with a constrained end. The front electrode pattern is ...

Busbar-free electrode patterns of crystalline silicon solar cells for ...

Request PDF | Busbar-free electrode patterns of crystalline silicon solar cells for high density shingled photovoltaic module | As new technologies for high-performance PV modules are developed ...

Highly Reflective and Low Resistive Top Electrode for ...

Our first attempt to integrate AgNP films as top electrodes for PM6:Y6 solar cells are presented in the supplementary information with the best PCE at 9.4%. On the other hand, printed P3HT:o-IDTBR solar cells are ...

Revolutionizing photovoltaics: From back-contact silicon to back ...

The design of the Metallization Wrap Through (MWT) solar cell is similar to conventional Si solar cells, with a front emitter that extends to the rear side through-hole metal connections (Fig. 3a). These connections are established using methods such as laser drilling or mechanical abrasion.

Highly Efficient and Reliable Semitransparent ...

Transparent electrodes are essential to allow optical transparency for realizing semitransparent perovskite solar cells (ST-PSCs). This study addresses gallium- and titanium-doped indium oxide (IO:GT) between ...

Toward efficient and stable operation of perovskite solar cells: ...

The same group later uplift the efficiency of the top cell to 16.1% and consequently that of the tandem device to 22.1% by adopting substrate configuration for the top PSC, in which light is incident on the transparent AZO top electrode, and replacing FTO by $\text{In}_2\text{O}_3:\text{H}$. AZO films were used as both the front electrode and recombination layer in ...

Thin metal top electrode and interface engineering for efficient ...

Semitransparent perovskite solar cells with thin Ag or Cu top electrode are investigated. Interface of ITO/perovskite and [6,6]-phenyl-C 61 butyric acid methyl ester/Ag or ...

Electrode Design to Overcome Substrate Transparency ...

Herein, we introduce a new electrode design for large-area perovskite ($>1 \text{ cm}^2$) on high-transparency, low-conductivity ITO substrate compatible with high-temperature ...

Size optimization of the front electrode and solar cell using a ...

The pattern of the front electrode and the solar cell size has a significant influence on the performance of solar cells. In order to improve the conversion efficiency of solar cells, we present a combined finite-element-genetic algorithm (GA) method for designing the front electrode and solar cell size. In the proposed method, a solar cell is considered to consist of ...

Dual Interfacial Design Enables Efficient and Stable ...

1 Introduction. The last two decades have witnessed incredible advances in the development of perovskite photovoltaics with the certified power conversion efficiencies (PCEs) of single-junction solar devices approaching an impressive level of 26.1% [1]. As the single-junction solar cells are intrinsically constrained by the Shockley-Queisser (S-Q) radiative limit [2], there ...

Perovskite-cadmium telluride tandem solar cell based on special ...

An international research group led by the Indian Institute of Technology Bombay has developed a four-terminal (4T) tandem solar cell based on a top cell with a perovskite absorber and a bottom ...

28.3%-efficiency perovskite/silicon tandem solar cell by optimal ...

The transparency and conductivity of the top electrode for top cell are the main keys in tandem solar cell. Here, we demonstrate a continuous, ultrathin Au film as the top electrode by introducing a Cr seed layer, which improves the efficiency of semitransparent perovskite devices and tandem solar cells.

Optimal top electrodes for inverted polymer solar cells

In this contribution, we determine the optimal top electrode for practical PSC fabrication by investigating the influence of the electrode material on the optical properties and performance of PSC devices.

PTAA-infiltrated thin-walled carbon nanotube electrode with ...

Due to recent advances in perovskite solar cells (PSCs), the power conversion efficiency (PCE) of these cells has rapidly increased to values above 26%, and these cells exhibit potential for various applications; thus, PSC commercialization has been initiated in the solar energy industry. 1-5 This outstanding advance in PSCs is attributed to ...

Design of a solar cell electrode for a shingled ...

Although, Silicon solar cell is one of the most prevalent type of solar cells; manufacturing of this type of solar cells especially soldering copper electrodes to the silicon wafer is very ...

Semitransparent Organic Photovoltaic Cells with Laminated ...

electrodes are attractive for large area applications and roll-to-roll processing. In this letter, we demonstrate that solution-processed silver NW meshes can also be used as high-performance transparent electrodes on top of organic solar cells by a simple, dry lamination step, resulting in a semitransparent solar cell, as shown in Figure 1c. This

Solar Cells and Electrodes

Organic photovoltaic cells, similar to the right panel in Fig. 3.1, based on solution-derived graphene deposited on quartz, were described by Wu et al. (2008) these solar cells the layer sequence is graphene, copper phthalocyanine (CuPc donor)/fullerene (C 60 acceptor)/bathocuproine (BCP), Ag (1,000Å). (In comparison cells the quartz-graphene layer ...

Source Material Design for Realizing >50% Indium-Saving ...

Source Material Design for Realizing >50% Indium-Saving Transparent Electrode toward Sustainable Development of Silicon Heterojunction Solar Cells. Cite. ... For TCOs used in solar cell application, low resistivity with high carrier mobility is required. Via RPD process optimization, we obtained the minimal resistivity value of $6.08 \times 10 \dots$

Design and fabrication of a semi-transparent solar cell ...

We designed the ST-OSC by modifying the opaque Ag top contact of the structure using a MoO₃/Ag/MoO₃ DMD transparent top electrode with appropriate design ...

HKU Scholars Hub: Top electrode and active layer design for ...

Top electrode and active layer design for achieving fully solution-processed high-efficiency organic solar cells. (Thesis). University of Hong Kong, Pokfulam, Hong Kong SAR.

Transparent Electrode Techniques for Semitransparent and ...

Abstract Inorganic-organic halide perovskite solar cells have attracted significant attention to the photovoltaic community considering their high-efficiency, tunable bandgap, low-cost, and easy fabrication. Perovskite solar cells are especially an attractive top cell partner for tandem applications with silicon bottom cells and other solar cell types with lower bandgap ...

Electrode Design to Overcome Substrate Transparency Limitations for ...

This work presents design principles and methods for optimization wrap-around metal electrode, cell geometry, and transparent conductive oxide thickness enabling the demonstration of large-area mesoscopic perovskite solar cells on high-transparency low-conductivity substrate. A certified efficiency of 19.63% is achieved on 1.02 cm², which is the ...

Perovskite solar cells

This Primer gives an overview of how to fabricate the photoactive layer, electrodes and charge transport layers in perovskite solar cells, including assembly into devices and scale-up for future ...

Highly Efficient and Reliable Semitransparent Perovskite Solar Cells ...

Transparent electrodes are essential to allow optical transparency for realizing semitransparent perovskite solar cells (ST-PSCs). This study addresses gallium- and titanium-doped indium oxide (IO:GT) between the electron transport layer (ETL) and top electrode to potentially replace conventional indium tin oxide (ITO) used in inverted ST-PSCs.

Electrode Design to Overcome Substrate Transparency ...

Article Electrode Design to Overcome Substrate Transparency Limitations for Highly Efficient 1cm² Mesoscopic Perovskite Solar Cells Meng Zhang,^{1,*} Benjamin Wilkinson,¹ Yuanxun Liao,¹ Jianghui Zheng,¹ Cho Fai Jonathan Lau,¹ Jincheol Kim,¹ Jueming Bing,¹ Martin A. Green,¹ Shujuan Huang,¹ and Anita Wing-Yi Ho-Baillie^{1,2,*}
SUMMARY Fluorine-doped tin oxide glass ...

Design of a solar cell electrode for a shingled photovoltaic module ...

Accordingly, we focused on reducing the consumption of Ag paste used for the metallization of solar cells by designing busbar-free electrode patterns suitable for shingled photovoltaic modules. In this paper, we introduced the busbar-free design of the electrode patterns on the front and rear side of the crystalline silicon solar cells.

Applications of organic solar cells in wearable electronics

Organic solar cells (OSCs), with advantages that include high flexibility, portability, and low-cost solution-based processing, have achieved power conversion efficiencies of more than 19% and can thus serve as self-powered sources for sustainably powered wearable electronics. ... Design of the transparent top electrodes and the photoactive ...

Recently-explored top electrode materials for transparent organic solar ...

Transparent photovoltaics placed on the additional surface area of buildings, including windows and siding, have the potential to transform renewable energy generation. In contrast to their inorganic, silicon-based counterparts, organic solar cells (OSCs) have high absorption coefficients and can also be flexible, light-weight, and low-cost. However, the use of ...

Recent Progress of Electrode Materials for Flexible Perovskite Solar Cells

Flexible perovskite solar cells (FPSCs) have attracted enormous interest in wearable and portable electronics due to their high power-per-weight and low cost. Flexible and efficient perovskite solar cells require the development of flexible electrodes compatible with the optoelectronic properties of perovskite. In this review, the recent progress of flexible electrodes ...

Scalable CIGS Solar Cells Employing a New Device Design of

Therefore, high-efficiency, large-area CIGS solar cells require the development of a novel top electrode with high transmittance and conductivity. In this study, a microgrid/TCO hybrid electrode is designed to minimize the optical and resistive losses that may occur in the top electrode of a CIGS solar cell.

Design of a solar cell electrode for a shingled photovoltaic module ...

Although, Silicon solar cell is one of the most prevalent type of solar cells; manufacturing of this type of solar cells especially soldering copper electrodes to the silicon wafer is very ...

Flexible Organic Solar Cells Over 15% Efficiency with Polyimide ...

A highly flexible and durable transparent graphene electrode with thermal stability was developed via the direct integration of polyimide (PI) on graphene. Due to the high transparency of PI-integrated graphene electrode and intimate contact between graphene and PI substrate, high-efficiency flexible organic solar cell with a PCE of 15.2% and outstanding ...
