

Wind power and energy storage combined power station

Overview

Multi energy complementary system is a new method of solving the problem of renewable energy consumption. This paper proposes a wind -pumped storage-hydrogen storage combined operation system based on deep learning and intelligent optimization, which introduces deep neural network to predict wind power generation. With the goal of minimizing power fluctuation and maximizing economic benefits, the system is optimized by multi-objective genetic. Multi energy complementary system is a new method of solving the problem of renewable energy consumption. This paper proposes a wind -pumped storage-hydrogen storage combined operation system based on deep learning and intelligent optimization, which introduces deep neural network to predict wind power generation. With the goal of minimizing power fluctuation and maximizing economic benefits, the system is optimized by multi-objective genetic algorithm for the basic parameters of wind turbine arrangement, electrolyzer and pumped storage power station. After getting the Pareto frontier solutions, we use Technique for Order Preference by Similarity to Ideal Solution(TOPSIS) to select the best scheme. Taking a specific case study for example, the system reduces the daily power fluctuation from 104.20 MW to 23.37 MW, a drop of 77.60%, and produces daily economic benefit of 139,638.5 yuan. Finally, by comparing the system with 3 and 9 wind turbines, we confirm the flexibility and universality of our system.

- Wind power generation model based on deep neural learning.
- Generation optimization of combined operation of wind power-pumped storage-hydrogen energy storage.
- The simultaneous optimization of control and design of the combined system.

Renewable energy consumption Pumped storage Deep learning Intelligent optimization Renewable energy power generation is an indispensable part of building a clean and low-carbon energy system. At present,...

Article Content

Optimal Configuration of Wind-PV and Energy Storage in Large ...

Combined with the above analysis, the optimal configuration scheme of clean energy storage and multi-form power sources is 10 million kilowatts for wind power, 2 million ...

Optimal Dispatch for Joint Operation of Wind Farm and Combined ...

The adjustability of combined heat and power (CHP) plant is one of the main reasons for wind power curtailment problem in northern China, and thermal energy storage (TES) is an effective way to ...

Stochastic optimal scheduling of wind power and pumped-storage ...

Wind power generation has strong randomness and volatility owing to the influence of climate factors. The integration of massive wind power will present enormous threats to the safety and stability of power system operation [5, 6]. Therefore, wind power needs a more controllable energy with good regulation to compensate for it.

High-temperature thermal storage in combined heat and power ...

The needed transition to an energy system based on 100% renewable electricity generation is accompanied with a number of challenges. Most prominently, the intermittent nature of the dominating renewable-energy techniques, wind and solar power, requires complementary measures to balance the electricity production and consumption over various time scales .

Optimal operation of wind-solar-thermal collaborative power ...

The peaking capacity of thermal power generation offers a compromise for mitigating the instability caused by renewable energy generation .Additionally, energy storage technologies play a critical role in improving the low-carbon levels of power systems by reducing renewable curtailment and associated carbon emissions .Literature suggests that ...

A multi-objective optimization model for fast electric vehicle ...

The application of wind, PV power generation and energy storage system (ESS) to fast EV charging stations can not only reduce costs and environmental pollution, but also reduce the impact on utility grid and achieve the balance of power supply and demand (Esfandyari et al., 2019) is of great significance for the construction of fast EV charging stations with wind, ...

Energy storage capacity optimization of wind-energy storage ...

The construction of wind-energy storage hybrid power plants is critical to improving the efficiency of wind energy utilization and reducing the burden of wind power ...

Research on Wind Power Energy Storage Joint ...

Due to the uncertainty of wind power outputs, there is a large deviation between the actual output and the planned output during large-scale grid connections. In this paper, the green power value of wind power is ...

Optimization of shafting and excitation dual damping controller for ...

In recent years, owing to the increase in wind power generation penetration and large-scale integration of pumped storage power stations, the construction of new power systems has become the mainstream trend of energy development. Among them, the combined pumped storage-wind power system (CPSWPS) has complementary advantages of power and ...

Cooperative game-based energy storage planning for wind power ...

Considering the complementary effects of multiple wind farms, this paper proposes a planning scheme for a shared hybrid energy storage power station based on ...

Capacity configuration optimization of wind-solar combined power ...

In order to improve the anti-peak regulation and high wind curtailment rate of wind power, the CSP station and its energy storage system are introduced and the system capacity is configured and optimized. The scheduling optimization results are shown in Fig. 8. During the peak load period, the output of the CSP station makes up for the shortage ...

Optimal Capacity Allocation of Combined Output of Tower Gravity Energy ...

To solve the capacity planning problem of wind power energy storage hybrid system, a capacity planning method of tower gravity energy storage power station based on factor analysis is proposed. Considering the multi-objective complexity of capacity optimization of tower energy storage power station, a comprehensive evaluation index system for capacity planning of tower ...

Optimal Configuration of Wind-PV and Energy Storage in Large ...

Combined with the current situation of wind, PV, thermal power and energy storage, each connecting subject operates in an orderly manner according to the optimized dispatching mode. 4.2. Power Demand and Generation Characteristics ... a 50 MWh independent battery energy storage power station will be newly built, the unit kilowatt-hour ...

Capacity Value Assessment for a Combined Power Plant System ...

With the rapid increase in new energy penetration, the uncertainty of the power system increases sharply. We can smooth out fluctuations and promote the more grid-friendly integration of new energy by combining it with energy storage. This paper proposes an evaluation method for assessing the value of a combined power plant system of new energy and energy ...

Integrated dispatch for combined heat and power with thermal energy ...

An integrated energy system is one of the most effective measures to enhance the flexibility of an electrical power system [1, 2].The combined heat and power (CHP) unit is the most commonly used component of electrical-thermal coupling in integrated energy systems [3, 4].However, the coupling control of the heat and power output of the CHP unit heat and power ...

Configuration and operation model for integrated energy power station ...

Reference explored the revenue model of the combined wind power and energy storage system under different storage control modes in the power market environment, ..., this paper establishes a two-stage model for wind-PV-storage power station's configuration and operation. The model considers participation in multiple electricity markets and ...

Stochastic optimal dispatch of combined heat and power ...

Replacing fossil fuels with renewable energies is an effective solution to the current energy and environmental crisis in a has abundant wind energy resources and large installed wind power capacity the end of 2017, the total installed capacity of wind power in China was 188.39 GW, accounting for 34.7% of the total installed capacity of wind power in the ...

Combined Power Generating Complex and Energy Storage ...

It is shown here that the joint operation of HPPs and WPPs as part of a power complex and hydraulic energy storage allows for the creation of a stable power supply system ...

Optimization Configuration of Energy Storage Capacity in Wind ...

In order to further improve the configuration effect, a method based on gravity search algorithm for optimizing the energy storage capacity of wind solar storage combined power supply network is proposed. Analyze the wind power model, photovoltaic model, and energy storage model group of the wind solar storage combined power supply network; Construct the objective function and ...

Capacity Value Assessment for a Combined Power ...

In view of the volatility of the power system caused by the high proportion of new energy sources, such as wind power and photovoltaic power, this paper takes the combined power plant system of new energy and energy ...

Optimal Dispatch of Concentrating Solar Thermal Power (CSP)-Wind ...

A combined storage solution with a concrete storage for superheating of steam and a PCM-storage for evaporation of water was build in 2009 in a direct steam test loop, set up at the power plant ...

The First Domestic Combined Compressed Air and Lithium-Ion ...

On July 20th, the innovative demonstration project of the combined compressed air and lithium-ion battery shared energy storage power station commenced in Maying Town, Tongwei County, Dingxi City, Gansu Province. This is the first energy storage project in China that combines compressed air and lith

Research on wind-storage coordinated frequency regulation ...

The energy storage system can increase and decrease the output flexibly, which can improve the frequency regulation characteristics of the power system with wind power. Therefore, wind farms can build energy storage power stations with a certain capacity and undertake the task of frequency regulation.

(PDF) Economic analysis of wind-storage combined power station ...

In this paper, the wind-storage combined operation power station is taken as the research object, the investment cost estimation model is established, and the combined operation mode is analysed ...

Day-Ahead Optimal Scheduling of Combined Wind Power

To enhance the efficacy of pumps for storage power stations' active power regulation capabilities and encourage the utilization of wind energy, in light of the operational features of pumped storage, this research proposed a day-ahead optimum scheduling of a combined wind power generating system, taking into account pumped storage operation ...

Energy storage capacity optimization of wind-energy storage ...

Simultaneously, wind farms equipped with energy storage systems can improve the wind energy utilization even further by reducing rotary back-up . The combined operation of energy storage and wind power plays an important role in the power system's dispatching operation and wind power consumption .

Combining the Wind Power Generation System With Energy ...

To enable a proper management of the uncertainty, this paper presents an approach to make wind power become a more reliable source on both energy and capacity by ...

Integrating solar and wind energy into the electricity grid for ...

The benefits of both solar and wind power are combined in solar-wind hybrids. Solar energy panels produce electricity throughout the day, whereas wind turbines can run continuously, contingent upon the strength of the wind. This hybrid strategy makes the most of wind and solar energy to maximize energy production. Cost and Installation

Coordinated control strategy of multiple energy storage power stations ...

Coordinated control strategy of multiple energy storage power stations supporting black-start based on dynamic allocation. Author links open overlay panel Cuiping Li a, Shining Zhang b, Junhui Li a, ... Combined with Fig. 1, after the wind power cluster is instructed to cooperate with the black-start, the ESSs assist the wind farm started, the ...

Combined Power Generating Complex and Energy Storage ...

Combining wind and hydropower facilities makes it possible to solve the problems caused by power supply shortages in areas that are remote from the central energy system. Hydropower plants and highly manoeuvrable hydroelectric units successfully compensate for the uneven power outputs from wind power plants, and the limitations associated with them ...

Hybrid energy storage configuration method for wind power ...

Overview of the basic planning scheme. All analyses of this paper are based on the planning Scheme for a Microgrid Data Center with Wind Power, which is illustrated in Fig. 1. The initial ...

Multi-Scheme Optimal Operation of Pumped Storage ...

In multi-energy complementary power generation systems, the complete consumption of wind and photovoltaic resources often requires more costs, and tolerable energy abandonment can bring about the more ...

Calculation and Analysis Method of Power Quality in Wind-power-storage ...

The increasing integration of expansive wind farms into the power grid, along with the widespread implementation of energy storage on the grid, has led to a growing focus on the power quality issue within the combined wind power storage system. Therefore, this paper analyzes the power quality of the wind-power-storage combined system from the aspects of harmonic analysis, ...

Flexibility enhancement of combined heat and power unit ...

Heat-power peak shaving and wind power accommodation of combined heat and power plant with thermal energy storage and electric heat pump. Energy Convers Manag, 297 (2023), Article 117732. ... Increasing the flexibility of combined heat and power for wind power integration in China: modeling and implications. IEEE Trans Power Syst, 30 (4) (2015 ...

Research on Wind Power Energy Storage Joint Optimization

Due to the uncertainty of wind power outputs, there is a large deviation between the actual output and the planned output during large-scale grid connections. In this paper, the green power value of wind power is considered and the green certificate income is taken into account. Based on China's double-rule assessment system, the maximum net ...

Optimal design of combined operations of wind power-pumped storage ...

At present, many scholars optimize the design and scheduling of multi-energy complementary systems with the help of intelligent algorithms. Gao et al. used intelligent optimization algorithms to realize the joint operation of the mine pumped-hydro energy storage and wind-solar power generation. This paper uses the natural location of abandoned mines to ...

Coordinated control of wind-storage combined with primary ...

General control diagram of wind and storage combined power system. The blades of a doubly fed induction generator (DFIG) capture natural wind energy and convert it into mechanical energy for power generation. ... Energy storage capacity optimization of wind-energy storage hybrid power plant based on dynamic control strategy. J. Energy Storage ...

Demand Response Strategy Considering Industrial Loads and Energy ...

To address the challenges of reduced grid stability and wind curtailment caused by high penetration of wind energy, this paper proposes a demand response strategy that considers industrial loads and energy storage under high wind-power integration. Firstly, the adjustable characteristics of controllable resources in the power system are analyzed, and a ...

Applications of flywheel energy storage system on load frequency ...

A hybrid energy storage system combined with thermal power plants applied in Shanxi province, China. Taking a thermal power plant as an example, a hybrid energy storage system is composed of 5 MW/5 MWh lithium battery and 2 MW/0.4 MWh flywheel energy storage based on two 350 MW circulating fluidized bed coal-fired units.

Multi-Scheme Optimal Operation of Pumped Storage Wind-Solar ...

In multi-energy complementary power generation systems, the complete consumption of wind and photovoltaic resources often requires more costs, and tolerable energy abandonment can bring about the more reasonable optimization of operation schemes. This paper presents a scheduling model for a combined power generation system that incorporates ...

Hybrid Pumped Hydro Storage Energy Solutions towards Wind ...

It explores the combined production of hydro, solar and wind, for the best challenge of energy storage flexibility, reliability and sustainability. ... Data were collected from meteorological records at a wind and solar power stations located at the geographical coordinates of 38°47'4" N (latitude) and 9°29'26" W (longitude), for an ...

Capacity configuration optimization of wind-solar combined power ...

The CSP station has flexible power regulation capacity and excellent environmental friendliness, and its thermal storage system has the characteristics of quick start and stop and flexible adjustment range, which can effectively restrain the power fluctuation of the new energy power generation system and improve the absorption capacity of new ...
